

Front, top and center: Our services for your pitch system.

Pitch systems

Switch and
control cabinets

Service

When it comes to service, it's all about you.

Not only do we design and build complete pitch systems, we also service them. This makes us a competent service partner whom you can count on for assistance at any time – throughout and beyond the warranty period. We understand our service as a real added value that far exceeds the technical performance of any pitch system.

Onsite service

Spare parts management

Instruction/Training

Excellent local support: Our onsite service.

i

Our service in a nutshell

You know exactly what you want, we know exactly how it works. With individual upgrades, commissioning or onsite servicing.

Our own service teams are an integral part of our service department. But they are also flexible and apply their many years of experience to the servicing of pitch systems for your customer's wind turbines. They also have the know-how to identify the best possible upgrades necessary for improving your pitch system's performance. This might be a

special battery charging process or an individual solution developed by our engineers on your request. A first step in this direction takes you, for example, to our website:

Find out more about our technical support and other services at www.ssbwindssystem.de

Our commissioning service: The path to your perfect pitch system.

At our facilities:

- Initial function test of your PLC.
- Simulation of set values (e.g. data exchange or load cycles).

At your production facilities:

- Testing of interaction between sensors and mechanics.
- Actual behavior of entire system is tested.

At the WTG site:

- Finetuning to optimize the system settings.

Incomparable: Our spare parts.

i

Reliability for the long haul: Our spare parts supply.

We offer spare parts supply for the entire 20-year lifecycle of a WTG for all systems supplied by us.

We maintain our own stock of the numerous parts, upgrades or entire conversion kits for each pitch system developed or produced by us. Our spare parts supply ranges from the smallest component to the complete replacement of control cabinets. We'll even produce them from scratch when necessary with all the necessary interfaces and functions compatible with your WTG.

A smart approach: Our training.

The experience of developing each pitch system in close cooperation with our customers has taught us the value of sharing our know-how. This continues long after the development phase. For example, by request we will train the service engineers and

fitters at your production facilities on how to optimally implement the pitch system in the hub of your WTG or on an individually determined subject. The training can also be carried out directly at the WTG site itself.

i

Precise know-how, available anywhere.

We share our know-how with your mechanics and service employees nearly anywhere: At our offices in Salzbergen, at your production facilities or at the WTG itself.

Our quality at a glance.

Our people.

- 400 highly motivated employees (including more than 50 developers)

Our pitch products.

- Complete pitch systems with: AC and DC drives, converters, controllers, axis and central controller cabinets, emergency power supply, climate packages

Our services.

- Consulting, development, construction, production, QM & system tests, services
